

The website [Apple Classrooms of Tomorrow](#) suggests that there are 5 developmental stages that educators go through on the road to embracing technology integration:

- **ENTRY** : learning to use technology; assimilating into direct instruction
- **ADOPTION** : using technology to support traditional instruction; teachers are able to anticipate problems and troubleshoot solutions
- **ADAPTATION** : using technology to enrich instruction; at this stage, there is more frequent and purposeful use of technology and teachers realize that technology can save time and increase productivity
- **APPROPRIATION** : turning point for teachers - integrating technology and using it for its unique capabilities
- **INVENTION** : discovering new, innovative uses for technology; willing to experiment
